

CINCINNATI INDUSTRIAL MACHINERY

Industrial Washer Rebuilds

Cincinnati Industrial Machinery (CIM) has been building and servicing industrial washers for decades, but, over time many components become worn out due to age, or outdated because of new technology. Rebuilding a section of your industrial washer provides the latest technology and safety features while providing a cost effective solution to replacing the entire washing system. Avoid costly, unscheduled maintenance shut downs by having the rebuild, repair, or upgrade performed during scheduled downtime.

ARMOR AFTERMARKET

Armor Aftermarket, the post-sales division of CIM, provides OEM replacement parts, planned maintenance, and service repairs and has years of experience rebuilding and refurbishing both CIM and industrial washers manufactured by competitors. Refurbishing your existing washer maximizes efficiency and improves safety. Rebuilding your industrial washer corrects problems with deteriorated tanks, housings, risers, headers, nozzles, conveyors, drive units, dryer/oven panels, exhausts, and burners.

Armor Aftermarket recommends semi-annual audits and planned maintenance of industrial washers for continued safe and efficient operation. We offer parts and service to address these safety and maintenance issues. Machine systems inspected during an audit include:

- Solution heat source operation and efficiency, gas fired, electric, or steam
- Pump function
- Process solution tank condition
- Burner operation and safeties
- Spray header assembly and nozzle deterioration
- Web conveyors/Monorail conveyors, Power and Free conveyors
- Conveyor drive units
- Gas line inspection
- Utility supply line pressures
