

Can Washer Rebuilds and Modernizations

Minimize lost production time

Cincinnati Industrial Machinery, the trusted name in the two-piece can washer industry since 1963, offers rebuild and modernization services for your existing can washer through our post-sales division, Armor Aftermarket.

The advantage of rebuilding a section of your can washer rather than a total replacement includes less expense while the two-piece can washer industry globally, with operations in North America, Asia, and Europe.

Why Upgrade?

The front end of a can washer endures the most wear and tear due to corrosion from the strong acids used in the processing of aluminum beverage cans. Cincinnati Industrial Machinery can build and install a new front end for your washer using the latest technology, which will increase the lifespan and up-time of your current washer, while achieving a cost savings on water and chemicals. This upgrade will also improve the function of the machine's spray time, temperature, and pressure.

Cincinnati Industrial Machinery Offers

- Rebuild & Modernization
- Turn-key installation
- Replace and Upgrade worn out parts in the field
- Supervised start-up installation
- OEM replacement parts for all makes and models
